

CHEM-STAR™

Classic Dip™

PRODUCT DESCRIPTION

Chem-Star™ Classic Dip™ is a non-iodine teat dip that provides fast, broad-spectrum germicidal activity plus extended antimicrobial protection after dipping.

BENEFITS

Effective

- University tested and found to be highly effective in reducing new mastitis infections caused by *Staphylococcus aureus*, *Streptococcus agalactiae* and coliform type bacteria.
- A reduced number of new infections translates into higher milk productivity per cow. Higher milk productivity means higher income per cow.
- Antimicrobial protection for the important hours after dipping
- Provides broad-spectrum germicidal protection against mastitis causing organisms.
- In addition to reducing new infections, *Classic Dip™* helps in keeping teats soft and pliable.

Gentle

- Non-iodine formula eliminates many problems associated with iodine teat dips - less irritating, no offensive odor, eliminates a source of iodine contamination of milk and cannot be confused with high-acid iodine udder washes.

Classic Dip™

PROPERTIES

Form liquid
Color blue
Specific gravity 1.008
Pounds per gallon 8.40 (3.81 kg)
pH 6.9
Formula ingredients contain no phosphorus.
ACTIVE INGREDIENT:
Chlorhexidine gluconate 0.35%
Quaternary Ammonium 0.04%
Contains glycerine as a skin emollient
Freezing Point 32°F/0°C
Separates - do not use

TO USE

Directions for teat dipping

Pre-Milking: Fill teat cup with *Classic Dip™*. Do not dilute. Before each cow is milked, dip the teats as far as possible into the dip cup containing *Classic Dip™*. Wipe teats dry after dipping using single-service towels to avoid contamination of milk.

Udders and teats which are heavily soiled should be washed before using a pre-milking teat dip. Teats should then be dried with a single-service towel and dipped in *Classic Dip™*, wiping the teats dry before milking.

Post-Milking: Immediately after milking, use *Classic Dip™* at full strength. Submerge entire teat in *Classic Dip™* solution. Allow to air dry. Do not wipe. Always use fresh, full strength *Classic Dip™*. If product in dip cup becomes visibly dirty, discard contents and replenish with undiluted product. Do not reuse or return used product to the original container. Do not turn cows out in freezing weather until *Classic Dip™* is completely dry.

Use proper procedures for udder washing or pre-milking teat dipping just prior to next milking to avoid contamination of milk.

Directions for teat dipping

Immediately after milking, use *Classic Dip™* at full strength. Dip entire teat with *Classic Dip™* solution. Allow to air dry. Do not turn cows out in freezing weather until *Classic Dip™* is completely dry.

For cautionary and first aid information, consult the Material Safety Data Sheet (MSDS) or product label.
