**630 Cows, 3X - Dbl. 16 - 92 lb. Herd Avg.**

# IMPULSE IP-MV

**"The Biggest Advance in the  
Milking Process in a Generation"**

Kinnamon Ridge Dairy LLC, located near Reedsburg, WI milks 630 Cows, 3X in a Double 16 Herringbone Parlor. They have a 92 lb. herd average and SCC of 250,000. Linda White learned about the inflation while attending the 2011 Oshkosh Farm Show in WI. She liked the concept and shared the information with her husband Jerry. They were using a round inflation from a U.S. Supplier.

Todd Mieden, Sale/Service Technician from Agri Dairy graphed teat end vacuum and tested pulsation, which is a service that is provided by Agri-Dairy FREE. Todd said, "After doing all that, we decided not to change anything as the numbers looked good." IMPULSE has a liner map which provides optimal settings that maximizes it's performance.

Jerry said, "We immediately noticed a difference. We had tons of slipping and squawking previously, now it's next to none. In fact we could hear the squawks all the time from our office at the front of our building. Now it's much quieter." He went on to say, "We were on our Milkers all the time to go back and reattach units. We are not only happy the slips have stopped, but our Milkers are happy too. Reattaches have virtually been eliminated. The cows like it too as is there is less dancing at the point of take-off."

Jerry really liked the IMPULSE Triangular Liner-Shell System Concept. "I feel confident because the liner fits the shell, there is no twisting. I also like the mouthpiece vent as it keeps the milk away from the teat leaving the teat completely dry, allowing our teat dip to work better." Jerry concluded by saying, "Our teat ends are great now! I have recommended the IMPULSLE IP-MV to other producers.....It's a good product."
