90 Cows, 2X - Tie Stall - 135,000 SCC

IMPULSE IP-MV

**"The Biggest Advance in the
Milking Process in a Generation"**

Schumacher Farms, located in Eyota, MN, milks 90 Cows, 2X in a Tie Stall Barn. They have a 135,000 SCC. They've been milking with round inflations for nearly 25 years. Jesse's brother Dillan, after attending the 2011 Rochester Farm Show, told the family that the IMPULSE Triangular Liner-Shell System concept made sense, and we should give it a try. At this point Jesse said, "Our SCC was 200,000 and teat ends were going the wrong way."

Brian Speltz, Milk Harvest Specialist for S&S Dairy Supply, upon putting the IMPULSE IP-MV's on, graphed and set the system up to maximize performance. Brian said, "This is a service we provide FREE of charge to all our customers who are interested in the IMPULSE. Our success rate is well over 90%. Overall, our customers are seeing results and are extremely happy!"

Jesse said, "We noticed a difference immediately. We had one of our high producing cows that took 15-18 minutes to milk-out. First night with the IMPULSE she dropped to 10 minutes. Overall we noticed faster milk-outs!" Jesse further went on to say as a first night observation, "The units came right off after they were done milking. No pulling what-so-ever. They just fell off. Cows seemed comfortable."

Jesse went on to say, "Teat ends with our first calf heifers were blowing out... Today it is a non-issue!" We've been on the IMPULSE for 6 months and teat ends are the best they've ever been. Our SCC has dropped. We are sold on the IMPULSE!"

**"...We noticed a difference immediately.
We had one of our high producing cows
that took 15-18 min. to milk-out.
First night with the IMPULSE
she dropped to 10 min."**

"We are sold on IMPULSE!"
