

# PowrDipper <sup>PLUS</sup>

## INCREASE THE SIZE OF YOUR TEAT DIPPERS

PowrDipper Plus Kit  
10-60800

All RJB dip cups and PowrDippers use the same patented cup which was designed to fit the average lactating cow's teat. The cup shape and size were engineered so that a teat will completely fill the cup, causing dip to be pushed up and around the teat. This "displacement" of teat dip is the reason it only takes 4-5 ml of dip to completely cover all 4 teats.

**However, some teats are just larger than others** due to various reasons. Large teats will fit into the standard RJB cups, but herdsmen must pay more careful attention when dipping those teats to ensure complete coverage and to prevent the cup from overflowing. The **PowrDipper Plus** is a device that can be snapped onto a standard cup, adding an extra 1/2 inch of depth and

more than doubling the capacity of the cup. It is easily added to any RJB dip cup or PowrDipper when needed and can be removed to return to normal use. The **PowrDipper Plus** allows herdsmen to dip larger teats without taking extra care to get good coverage. Teat dip coverage of the teats is the same whether using the **PowrDipper Plus** or the standard cup.
