IMPULSE IP-MV

"The Biggest Advance in the
Milking Process in a Generation"

Speltz Dairy LLC, located in Oak Ridge, MN milks 702 Cows, 3X in a Double 12 parlor. They have a 150,000 SCC. John Speltz, Owner, was experiencing poor teat ends and uneven milk-outs.

John said, "I tried (3) other liners... a silicon liner, left me with rings around the top of teats and horrible teat ends... lots of 3's & 4's. A different US branded one resulted in extremely uneven milk-outs, between 100 & 120 reattaches. Another one was suppose to clean up the teat end issues, but all we got was quarters not milked out, a loss of milk time and no improvement in our teat conditioning. As soon as I put a new liner on, I was looking for another."

John explained his situation and liner experiences and Mark Swenson from S&S Dairy Systems immediately recommended the Impulse IP-MV Triangular Liner System. John said, "I noticed a difference right away. I did not know teat ends could look that good. Within a second change (one month), they were cleaned up! I did not think they would get to where they are now that quick."

John also said, "I had lots of stepping and dancing with my heifers with the other liners. My milkers have not complained since the switch and it is no longer the main topic in our milker meetings!"

John concluded by saying, "Going into Winter we've never had good teat ends. I'm really happy this year, as they are the BEST they've ever been! I would definitely recommend IMPULSE to another Dairy!"
