impulseair[®] MV's

1 out of 3 cows in the US are Milked with Imulse Air Liners!

Now Available in a 12mm Milk Tube!

Designed to handle higher flow rates and provide better fit on larger inlet claws. Impulse Air = Better Performance!

3 out of 3 cows in the US Prefer Imulse Air Liners!

MOUTHPIECE VENTED LINERS

Providing Optimal Vented Air Flow,
 Milk Removal and Gentle Massage

The patented vented mouthpiece creates a controlled injection of air, producing a more direct milk flow and preventing harmful backsplash. In addition it lowers mouthpiece vacuum which reduces restrictions at the base of the teat that can impede milk flow and provides a gentle and rapid cluster removal. In partnership with our triangular liner and anti-twist shell this innovative combination increases milking performance, cow comfort and udder health.

- **Controlled, Balanced Airflow**
- **More Efficient Removal Of Milk**
- **Lower Mouth Piece Vacuum**
- **Less Restriction - Faster Milk Flow**
- **Improved Teat End Condition**
- **Reduced Teat Contamination**
- **Easier Cluster Removal**

**Right Side: Impulse Mouthpiece Vented Liner... NO SPLASH
 BACK ... NO CROSS-CONTAMINATION...NO RED DYE!
